TREE LIGHT SERIES

Tree lights are the best described as jewelry for your backyard and give your landscape a fairytale-like presence, and add ambiance to your other garden features, like a waterfall, fountain or cobblestone path.

There are three materials for the light fixtures-copper, brass and aluminum for your options and below performance feature of the three materials for your reference.

Copper is a natural metal that has a time tested immunity to oxidation. It has been used in many applications where it was vital that rust and corrosion would not effect its function. It turns a natural "Patina" or "Verde" color at any time.

Brass is an alloy derived from copper and has the same corrosion resistant properties. It can never rust, rot, or corrode, even in the harshest outdoor environments.

Aluminum is aircraft grade cast material. To be used outdoor powder coated and anti salt spray treatment on its surface then it can be better weather resistance.

ACCENT LIGHT SERIES

ACCENT LIGHT SERIES

Accent Lights create dramatic effects in the landscape. Focus illumination on trees, shrubs, statuary or exterior walls with uplight, silhouetting, downlight, grazing, floodlighting or cross lighting that enhance the home and landscape.

There are three materials for the light fixtures -copper, brass and aluminum for your options and below performance feature of the three materials for your reference

Copper is a natural metal that has a time tested immunity to oxidation. It has been used in many applications where it was vital that rust and corrosion would not effect its function. It turns a natural "Patina" or "Verde" color at any time.

Brass is an alloy derived from copper and has the same corrosion resistant properties. It can never rust, rot, or corrode, even in the harshest outdoor environments.

Aluminum is aircraft grade cast material. To be used outdoor powder coated and anti salt spray treatment on its surface then it can be better weather resistance.
